

## Enhancing Separation Efficiency in European Syngas Industry by using Zeolites (ZEOSEP)

### Resumen:

The project is funded by the European Research Council as a Proof of Concept (PoC).

The Proof of Concept that we propose is the development of a zeolite-based separation process to obtain carbon dioxide-neutral fuels and chemicals. The process that we plan to design is based on gas uptake and release, combining separation efficiency with low separation costs.

### Objetivos:

This proof of concept (PoC), hosted by UPO, aims to explore the commercial potential of the research knowledge and results developed within the previous ERC-RASPA project (ERC-StG).

### Objectivos contribución:

The specific objectives are:

- Technical test and process validation
- Competitive analysis
- Development of a business case
- Analysis of intellectual property
- Commercialization

### Entregables:

The project comprises on the one hand the technical tests and process validation and on the other hand the competitive analysis, business plan and commercialization.

### Impacto:

This project will contribute to enhance current existing technologies and new disruptive procedures, that would imply different benefits at an economic, environmental, social and research level.

**Presupuesto:** 150,000.00

### Equipo de investigación

**Nombre:** Nanostructured materials for technological applications

**Email:** scalero@upo.es

**PAIDI:** FQM319

**Web:** <http://www.upo.es/raspa/>

**Investigador principal:** Sofía Calero Díaz (Principal Investigator)

**Email:** scalero@upo.es

**Universidad:** Universidad Pablo de Olavide

**Enlace:** <http://www.upo.es/raspa/>

**Estado:** published
